

■ Your Cognitive Profile

Based on EEG brain activity and memory test performance
Date: 2026-04-03 15:01

This report combines your brainwave patterns (EEG) with your game performance to reveal your cognitive strengths and a

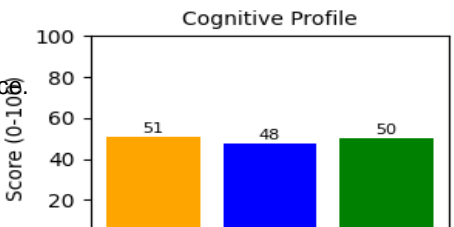

Stroop Test

- Low engagement – the task may have felt easy or boring.
- Practice recognizing the color rather than reading the word.

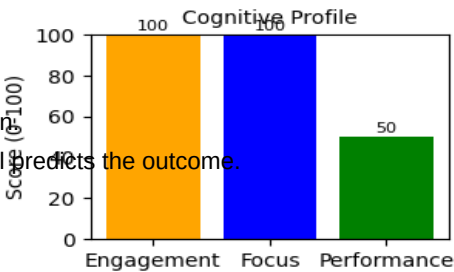

N-Back Test

- Use visualization strategies to remember the sequence.

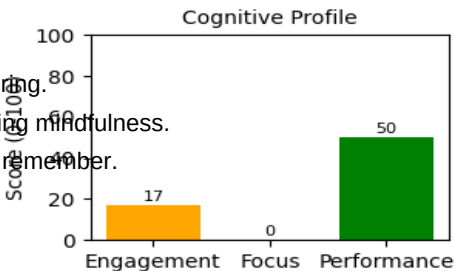

Pattern Recognition

- High engagement – your brain was fully invested.
- Excellent focus – you maintained strong concentration.
- The hidden rules take time. Try to track which symbol predicts the outcome.

Corsi Block Test

- Low engagement – the task may have felt easy or boring.
- Difficulty focusing – consider taking breaks or practicing mindfulness.
- Use chunking – group blocks into smaller patterns to remember.

■ Your Brain Strengths & Growth Areas

- Your strongest memory test: Stroop Test with 0.0% accuracy.
- Area to improve: Stroop Test (0.0% accuracy).

■ Cognitive Insights:

- Stroop Test: Moderate engagement and performance. Keep practicing to strengthen neural pathways.
- N-Back Test: Moderate engagement and performance. Keep practicing to strengthen neural pathways.
- Pattern Recognition: Moderate engagement and performance. Keep practicing to strengthen neural pathways.
- Corsi Block Test: Moderate engagement and performance. Keep practicing to strengthen neural pathways.

Remember: Your brain's efficiency isn't just about scores – it's about how you use mental resources.
Keep training regularly to improve your cognitive skills. ■■
